"E-crane's Blockbuster crane at the Rotterdam harbour"

A modified version of the E-Crane (a 3000 Series E-Crane® model 5045S-CRD) active for the construction of the Maasvlakte 2 Seawall.

A modified version of the E-Crane (a 3000 Series E-Crane® model 5045S-CRD) active for the construction of the Maasvlakte 2 Seawall.

Contracters combination PUMA will deploy the specialist E-Crane® for placing heavy concrete blocks, weighing over 40 ton each, from the existing block dam into the hard seawall of the Maasvlakte 2 area.

The land-bound E-Crane® with lifting capacity of 50 tons and a 63 meter reach from the heart of the machine can place the concrete pieces with much more accuracy than would be possible with current maritime equipment. Furthermore, PUMA can continue working with this E-Crane® during stormy weather. The crane is being adapted by E-Crane Worldwide in close cooperation with PUMA.
