

FLOATING SOLUTIONS

E-CRANE[®]
EQUILIBRIUM

E-CRANE'S FLOATING BULK HANDLING TERMINALS

20 years ago, E-Crane® delivered the first barge mounted E-Cranes for offloading barges and small ships. E-Crane® has adapted this concept for offloading ships up to Panamax-class and has more than 30 units successfully operating world-wide. These E-Cranes have been developed in close cooperation with our clients. The concept of a floating bulk handling terminal is well suited for both port operations (ship-to-shore) as well as midstream transfer (barge-to-ship and ship-to-barge).

THE E-CRANE® ORGANIZATION IS ALWAYS OPEN MINDED WHEN IT COMES TO SOLVING OUR CLIENT'S NEEDS AND REQUIREMENTS. THIS FAMOUS "CAN-DO" ATTITUDE HAS RESULTED IN "CUTTING EDGE"-SOLUTIONS THAT HAVE SUCCESSFULLY SERVED OUR CUSTOMERS WORLD-WIDE.

Lieven Bauwens, CEO E-Crane®

The development of the E-Crane® Floating Bulk Terminal is another logical step in the evolution of this unique material handling concept. Floating transloading terminals address several material handling needs that are present in today's rapidly changing environment. This concept offers the following benefits:

- The complete terminal can be built and tested and then floated to its final destination
- The terminal can be located at the closest possible location to the mine, at the preferred transfer point or near the end user, all with limited local regulatory requirements.
- The complete terminal can be relocated quickly and cost effectively if required.
- The minimum investment combined with a short delivery time provides for an excellent return of investment.
- The option to have a floating buffer storage to smooth out any peaks and valleys between inbound and outbound material deliveries.

"THE E-CRANE® HAS CUT OUR UNLOADING TIME IN HALF, CUT OUR MAINTENANCE TIME DRAMATICALLY AND JUST GENERALLY SIMPLIFIED OUR LIVES AND REDUCED OUR COSTS SUBSTANTIALLY"

Tom Noble, Lowman Power Plant

E-Crane Floating Solutions

Transparency & simplicity: our way... Your benefit!

The floating terminal offloads between 20 and 25 barges (1800 ton/barge) per day. Year after year, close to 6 million tons of Bauxite is transferred in an 8 month time window...

The Global Materials Services de Venezuela (GMSV) terminal is located near a bauxite unloading facility along the Orinoco River in Venezuela. This floating terminal was developed to improve the bauxite unloading at the existing port in this important region of Venezuela. The previous system of bauxite unloading had several limitations: poor serviceability and availability of the existing unloading equipment as well as interference of barge unloading with ship loading since the existing dock was used by ships as well as barges. The upgraded floating barge unloading terminal is now built around two equilibrium cranes mounted on an ocean going barge.

The two E-Cranes unload all the bauxite or the nearby alumina producer (CVG Bauxilum). This material originates from the El Jobal mine located 650 km downriver and is transported by barge.

Equipped with two E-Cranes, one with 15 tons, the larger with 25 tons lift capacity, this installation has a proven bauxite unloading capacity of close to 6 million tons in an 8 month time window (navigation season)! The terminal has been in successful operation since early 2002 and is proof of E-Crane's excellent reliability and ease of operation in an extremely tough environment.

***“WE INVESTIGATED VARIOUS OPTIONS AND EQUIPMENT MANUFACTURERS.
OUR FIRST CHOICE WAS THE E-CRANE®”***

Jim Gutsch, Vice President Seaboard Corporation

- 1** A wide variety of heavy-duty undercarriages (fixed, free-standing, crawler, rail and rubber tire versions available).
- 2** Quiet, comfortable cab with excellent visibility and ergonomic operator control station comes standard with air-conditioning.
- 3** A wide range of attachments available.
- 4** Extra large, three row roller bearing for enhanced durability.
- 5** A wide choice of boom and stick lengths with optimized design, featuring extra large and stiff box section structures for added strength and longer service life.

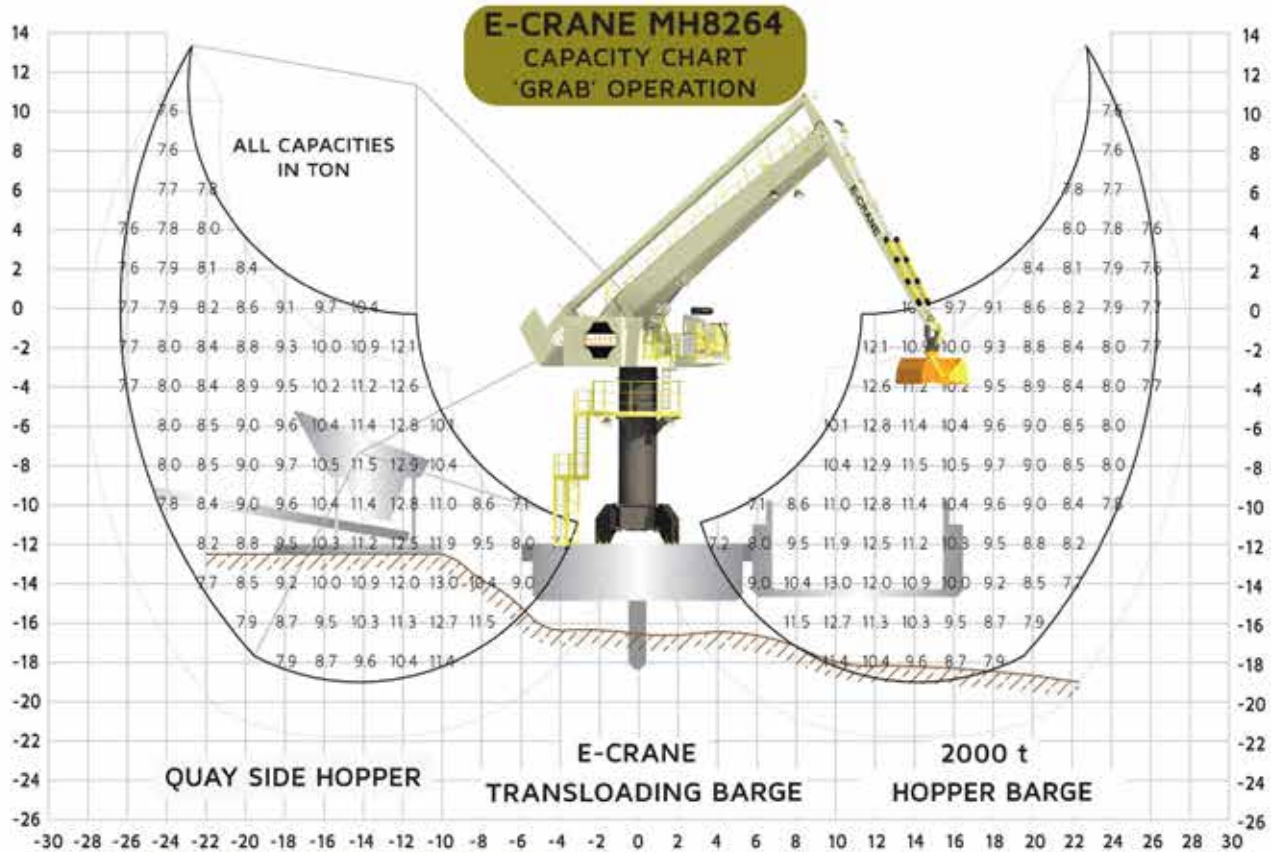

E-Crane Floating Solutions

Superior Efficiency & Productivity... Now Within Reach!

5

- 
- 6 Fully enclosed power module with excellent access to all service points providing simplified maintenance thus saving time and money.
 - 7 Maintenance free mechanical link between stick and the moving counterweight assures crane remains in a near balanced condition throughout its operating range - forever!
 - 8 Hydraulic pumps only circulate fluid when called for by the operator providing increased energy efficiency and reduced heat in the hydraulic system.
 - 9 Oversized pins and bushings in combination with our central lubrication system: minimizing bearing pressures and maximizing bushing and pin life.
 - 10 Two identical large-bore cylinders, featuring oversized spherical bearings and through-hardened steel bushings to ensure optimum service life.

E-Crane Floating Solutions

Custom Engineered to Meet Customer Requirements!

*Up to 500 t/hour
No Ropes!*

*Barge-to-Shore
Solution*

E-Crane's Superior Crane Balance:

- Provides excellent stability
- Reduces barge dimensions
- Results in unmatched energy efficiency
- Combines superior productivity with long-term reliability

Rigid Connection with Grab for:

- High placement accuracy
- Work underneath coamings
- Optimal grab weight
- Best grab opening & closing speed

VOLGA, SUCCESSFUL IN OPERATION SINCE 2013

The MH900 series balanced material handler has been installed onto a floating terminal in the port of Kazan for the Russian company Volga Shipping. It is being used for gravel and sand unloading.

Crane Capacity

Grab Operation	max 12,5 t
Hook Operation	max 13,5 t

Main Dimensions

*Ship-to-Shore
Solution*

Crane and Barge Fit Like 'Hand in Glove'!

- The E-Crane solution provides increased offloading capacity
- Great efficiency combined with excellent reliability
- Minimum investment using an existing barge

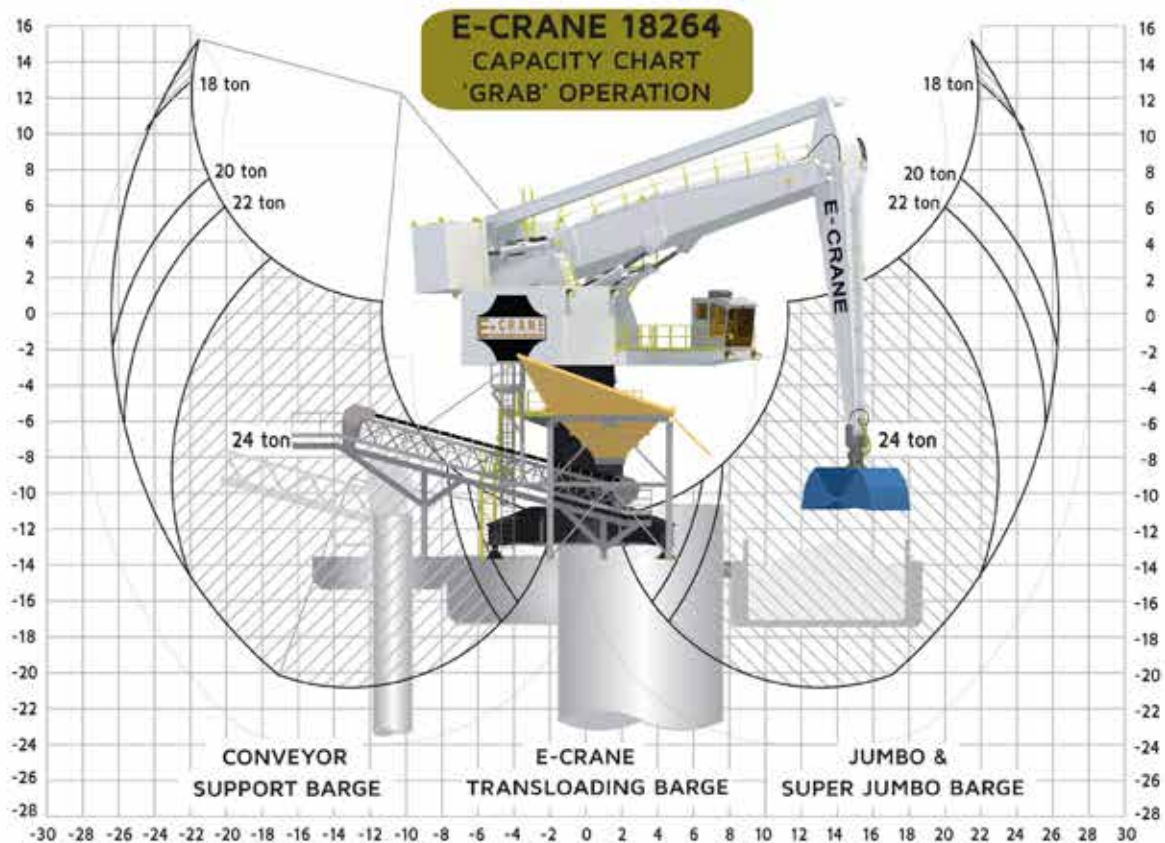

Advantages over Other Floating Crane Concepts:

- Counterweight moves up & down, as well as back & forward for smaller tipping moments resulting in best barge stability

SEABOARD/MIDEMA, SUCCESSFUL IN OPERATION SINCE 2008

Seaboard operates a 1500 Series E-Crane specially designed to unload up to Handymax sized vessels from ship-to-shore or for transloading from ship-to-ship. E-Crane carried out conceptual design studies in close cooperation with the client to determine an optimum floating terminal concept.

Floating Transloading
Terminal*

E-Crane Barge Shifting and Breasting Solutions:

- The ultimate system in barge moving controllability.
- Utilizes infinitely variable speed control in both the breasting and moving modes
- Ensures that the lines remain under controlled tension throughout the moving process
- Results in smooth acceleration and deceleration
- Perfectly integrated into crane operators cab for best comfort & safety

LOWMAN, SUCCESSFUL IN OPERATION SINCE 2007

When PowerSouth Energy Cooperative upgraded its Lowman Power Plant for gas desulfurization, E-Crane offered a turnkey solution to the material unloading and river level problems: a floating terminal consisting of two barges, a hopper, a barge-haul system and a barge-breasting system.

Crane Capacity

*Barge-to-Ship
Mid-Stream
Operation*

E-Crane®, Best Choice for Professional Bulk Handling:

- Used for loading & unloading Panamax & Capesize vessels
- Excellent performance for tough, heavy or sticky bulk cargos
- Push down capability into bulk materials for best possible grab filling
- Minimum investment using an existing barge

MAGGI, SUCCESSFUL IN OPERATION SINCE 2014

Maggi is a barge mounted 3000 Series E-Crane used to unload material barges. The material will be directly transferred to a Panamax sized ship on the other side of the crane barge. The midstream transfer will occur along the Amazon river and will be the largest midstream transfer operation ever accomplished for E-Crane.
